

CW-PDM

CUSTOM SOLUTION

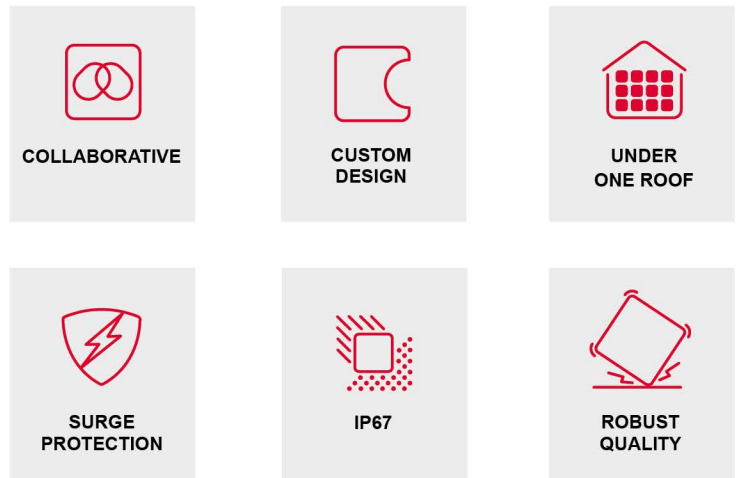

Power Distribution Module

400-800VDC

Typical applications:

All sizes HEV / FEV on- and off-highway commercial vehicles

Collaborative. Custom. Controlled.

Working together with the customer, our custom PDMs are designed into the electrical drive system from scratch. Meaning, they can be accommodated exactly where they are most efficient for the system configuration.

- **Collaborative** - working with the customer at design stage enables a truly bespoke integrated solution.
- **Robust design** - built using all vehicle grade components: AEC Q-100, 101 and 200. IP67 compliant enclosures.

- **Efficient** - integrated design exactly where it is needed reduces the need for complicated wiring and connection builds during production.
- **Everything under one roof** - Controlled from concept to manufacture in one facility improves project latency.
